DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, delay means as well as the N-tap combining filter and masking means (these are exemplary) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-17, and 21-23 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

In claim 1, 10, and 20, and 21, for example, recite a delay means/step that is not disclosed fully to understand the apparatus or method of detecting the waveform. How is this done?

Also, in claim 22, where exactly is the N-tap combining filter shown and described for one of ordinary skill in the art to make and use such an element in the invention as described.

Art Unit: 2817

In claim 8, how is the masking accomplished and where is this done physically; i.e., how does the mask get rotated and what does the symbol rotation?

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1,2,4,5,6,10,11,12,15,16,17-21 and 23 (as best understood) are rejected under 35 U.S.C. 102(b) as being anticipated by Milton et al(US 5,903,654).

The reference by Milton et al discloses an apparatus with the inherent method steps of detecting a waveform without demodulating the signal,(see figure 1), where a first signal(L1,L2), is received, delayed and combined to produce a correlated signal to determine a peak value(see cols. 5-7). There is inherent frequency offset. The specific code repeats every 1ms as noted in col. 3, lines 7-10.
